

**DIAMOND CORE DRILL BIT (YT-60376)**

**YT-60376**

**Performance and characteristic:**

**YATO HOLE SAW FOR DRILL HOLE SAW 102MM**

**Drill designed for non-impact operation – dry and wet – with a drilling rig (e.g. YT-81980). It enables quick and precise drilling of holes, also without a tripod, in reinforced concrete, concrete, silicates, e.g. for electrical boxes, drilling ceilings for pipes and cables, installation of cable routes or ventilation ducts.**

**Parameter of laboratory:**

YATO drill designed for idle operation – dry and wet – with a drill (e.g. YT-81980).
It enables quick and precise drilling of holes, also without a tripod, in reinforced concrete, concrete, silicates, e.g. for electrical boxes, drilling ceilings for pipes and cables, installation of cable routes or ventilation ducts.
Laser-welded segments resistant to overheating caused by rebar cutting, even in dry operation
A layer of soft cobalt in the segment allows drilling "hand-held" under cans in reinforced concrete, revealing a diamond, without
increased resistance to high temperatures, friction and mechanical damage
5/4" handle fits all tools on the market
crown length: 430 mm
for/ DLA : YT-81980

Power supply	Drill length 43 cm
Drill diameter	10.2 cm
Weight	2 kg

- Laser-welded segments resistant to overheating caused by rebar cutting, even in dry operation

The soft cobalt layer in the segment allows drilling "hand-held" under the cans in reinforced concrete, revealing the diamond, without the need for a tripod

increased resistance to high temperatures, friction and mechanical damage

5/8" handle fits all tools on the market

crown length: 430 mm
